

NForce One Website Enhancement

Corporate Website Modernization & Conversion Platform Product Requirements Document (PRD)

Version 1.3

AI. Quality Engineering. Digital Transformation. Built to Scale at Speed.

Field	Details
Prepared By	NForce One
Author / Product Sponsor	Naveen
Prepared For	NForce One Web, Marketing & Leadership Teams
Document Type	Internal Product Requirements Document
Version	1.3
Existing Website	https://nforceone.com/
Revision Summary	Consolidated website PRD including AI Website Assistant / Chatbot and Employee Testimonial requirements.

Purpose of this Document

This PRD defines the consolidated requirements to modernize NForceOne.com into a world-class enterprise technology website that clearly communicates NForce One's AI, Quality Engineering, Digital Engineering, Telecom, product innovation, and US + India delivery capabilities while improving credibility, storytelling, lead generation, employer branding, and conversion. It also includes requirements for an AI Website Assistant / Chatbot and employee testimonials with employee-submitted photos, subject to approval and consent.

1. Executive Summary

The NForce One website must be redesigned as a strategic business-development and credibility platform, not simply refreshed as a visual brochure. The enhanced experience must quickly explain what NForce One does, demonstrate real delivery capability, showcase real people and products, and make it easy for enterprise prospects to engage with the company.

10-Second Positioning Goal

A new visitor should understand within approximately 10 seconds that NForce One is an AI, Quality Engineering, and Digital Transformation company with deep Telecom expertise and scalable US + India delivery.

1.1 Core Outcome

The redesigned site should create the perception of a credible, experienced, innovative, and modern technology partner that can both build technology and deliver enterprise-scale services.

1.2 Business Drivers

- Strengthen enterprise credibility with CIOs, CTOs, VPs, engineering leaders, procurement teams, partners, and prospective employees.
- Differentiate NForce One from generic IT services and staffing companies.
- Make AI, Agentic AI, Quality Engineering, Digital Engineering, and Telecom expertise immediately visible.
- Use real evidence: actual client testimonials, real case studies, actual company/employee photography, and real product screenshots.
- Improve conversion through stronger calls to action, contact flows, demo requests, and capability discussions.
- Create a maintainable content platform that can continuously publish case studies, products, insights, and capability updates.

2. Business Goals & Success Criteria

ID	Requirement	Priority
G-001	Clarify NForce One positioning and value proposition within the first screen / first 10 seconds.	P0
G-002	Increase enterprise credibility through real people, real client proof, real products, and real outcomes.	P0
G-003	Position AI, Agentic AI and AI Assurance alongside the company's Quality Engineering heritage.	P0
G-004	Establish Telecom as a visible industry differentiator rather than a generic industry listing.	P1
G-005	Create a complete case-study library for client engagements and all NForce products.	P1
G-006	Deliver a premium visual experience with brand-aligned colors and world-class motion design.	P1
G-007	Improve lead generation and make every major page conversion-ready.	P1
G-008	Preserve / improve SEO, performance, mobile usability, accessibility, security and analytics.	P1

ID	Requirement	Priority
G-009	Provide an AI Website Assistant / Chatbot that helps visitors discover capabilities, products and case studies while capturing qualified business inquiries.	P1
G-010	Strengthen employer branding through authentic employee testimonials and employee-submitted photos with consent and approval.	P1

2.1 Success Indicators

- No placeholder, copied, mismatched, or incorrect production content.
- All public testimonials, client names, photos, claims, metrics, and case studies are approved for publication.
- All primary pages have a clear purpose, primary CTA, and measurable analytics event.
- The site performs cleanly across desktop, tablet, iPhone, and Android devices.
- Animation quality is premium while respecting performance and reduced-motion accessibility settings.
- Marketing / business users can update approved content without developer intervention for routine changes.

3. Target Audiences

Content hierarchy, proof points, CTAs, and page architecture should be designed primarily for enterprise decision-makers and buyers.

Audience	What the Website Must Communicate
CIO / CTO / CDO	Needs confidence in strategic fit, engineering maturity, modernization, AI capability, security, and delivery scale.
VP / Director - Engineering, QA, Data, AI	Needs technical depth, delivery approach, accelerators, case studies, and expertise.
Telecom Technology Leaders	Needs domain credibility across OSS/BSS, customer experience, IVR/Voice AI, network/field operations, data and testing.
Procurement / Vendor Management	Needs company credibility, delivery models, locations, capabilities, references, and contact paths.
Partners / System Integrators	Needs clear services, delivery capacity, collaboration models, and specialization.
Prospective Employees	Needs a real view of teams, culture, innovation, careers, and the company's technical direction.

4. Scope

4.1 In Scope

- Full homepage redesign and messaging reset.
- Simplified information architecture and navigation.
- Core capability pages: AI & Agentic Solutions; Quality Engineering & AI Assurance; Digital Engineering; Data, Cloud & Enterprise Platforms.
- Major Telecom page redesign.
- Innovation & Products experience.
- Client case studies and product case studies.
- Actual client testimonials and approval workflow.
- Actual NForce company / employee photography and real product screenshots.

- About, Careers, Contact, engagement model and lead-generation experiences.
- Brand system, world-class animations, responsive design, accessibility, performance, SEO, security and analytics.
- Content audit and migration from the existing NForceOne.com site.
- AI Website Assistant / Chatbot for guided discovery, approved company Q&A, lead capture and demo / meeting requests.
- Employee testimonial / employee experience module with optional employee photo submission and publication approval workflow.

4.2 Out of Scope

- Changing the NForce One legal entity or corporate identity.
- Replacing the NForce One logo unless separately approved as a branding project.
- Publishing confidential client information, NDA-restricted data, or unapproved metrics.
- Building a new CRM, HR system, or other back-office platform as part of this website scope.
- Public release of products that leadership has not approved for external visibility.

5. Brand Positioning & Messaging

The website must move away from a generic "we do everything" IT-services presentation. NForce One should be positioned around four strategic capability pillars with Telecom and Quality Engineering as strong differentiators.

ID	Requirement	Priority
BR-001	Primary message must communicate: AI. Quality Engineering. Digital Transformation. Built to Scale at Speed.	P0
BR-002	The site must present NForce One as a technology and delivery partner, not primarily as a staffing company.	P0
BR-003	US + India delivery must be clearly communicated using Onshore, Offshore, and Hybrid delivery language.	P0
BR-004	Use "20+ Years of Technology & Quality Engineering Leadership" only as leadership / experience positioning, not as an unsupported company-age claim.	P0
BR-005	Every major page must use specific, differentiated messaging rather than generic technology marketing statements.	P1
BR-006	Language and visuals must consistently reinforce innovation, engineering rigor, quality, scalability, and enterprise readiness.	P1

6. Information Architecture & Navigation

Primary navigation should be simplified so prospects can understand the business quickly. SEO pages can continue to exist without overloading the main navigation.

Primary Item	Expected Structure
Home	Primary positioning, proof, capabilities, outcomes, products and conversion.
Capabilities	AI & Agentic Solutions; Quality Engineering & AI Assurance; Digital Engineering; Data, Cloud & Enterprise Platforms.
Industries	Telecom prominently; other strategic industries based on proven experience.
Innovation & Products	NForce-built products, AI accelerators, platforms and engineering innovation.
Case Studies	Client case studies and product case studies.

Primary Item		Expected Structure
About		Company, leadership, US + India delivery, culture, people and credibility.
Careers		Open roles, culture, learning, innovation and employee experience.
Contact		Capability discussion, project inquiry, demo request and general contact.
ID	Requirement	Priority
NAV-001	Reduce top-level navigation complexity and group individual services under strategic capability pillars.	P0
NAV-002	Telecom must remain easy to discover from Industries and relevant capability pages.	P1
NAV-003	Innovation & Products and Case Studies must be first-class navigation destinations.	P1
NAV-004	Navigation must support desktop mega-menu behavior and a simple, fast mobile menu.	P1

7. Homepage Requirements

The homepage must function as the primary NForce One sales story. It should move from positioning -> credibility -> capabilities -> differentiation -> proof -> products -> engagement -> CTA.

ID	Requirement	Priority
HOME-001	Hero must immediately state the core positioning and include two primary CTAs: Talk to an Expert and Explore Our Capabilities.	P0
HOME-002	Hero must include a premium, brand-aligned technology animation / interactive visual representing AI, engineering, data, testing, telecom or digital transformation.	P1
HOME-003	Add a credibility strip covering Technology & QA Leadership, US + India Delivery, Telecom Expertise, AI + Quality Engineering, and delivery models.	P0
HOME-004	Present four strategic capability cards: AI & Agentic Solutions; Quality Engineering & AI Assurance; Digital Engineering; Data, Cloud & Enterprise Platforms.	P0
HOME-005	Feature Telecom prominently as a deep-domain differentiator rather than one of many equal industry tiles.	P1
HOME-006	Add a Real Outcomes section using approved case studies and measurable business results.	P1
HOME-007	Add Innovation & Products with real screenshots / visuals and links to product stories or demos where approved.	P1
HOME-008	Add actual approved client testimonials in a premium format.	P1
HOME-009	Add engagement models: Onshore, Offshore, Hybrid, Managed Delivery, Project/SOW, and T&M / Staff Augmentation where appropriate.	P1
HOME-010	End with a strong enterprise CTA and a short, low-friction conversion path.	P0
HOME-011	Include the AI Website Assistant / Chatbot as a persistent, unobtrusive experience accessible across the homepage and major pages.	P1
HOME-012	Provide an optional employee-voice module on the homepage or Careers/About experience using approved real employee testimonials and photos.	P2

7.1 Recommended Homepage Story

1. Hero: AI. Quality Engineering. Digital Transformation. Built to Scale at Speed.
2. Credibility: leadership experience, US + India delivery, Telecom, AI + QE.
3. What We Do: four core capability pillars.
4. Where We Stand Apart: Telecom + deep Quality Engineering.
5. Real Outcomes: customer / program case studies.
6. Innovation & Products: demonstrate that NForce One builds technology.
7. How We Engage: flexible delivery models.
8. Client Voices: actual approved testimonials.
9. AI Assistant: help visitors discover services, products, case studies and next steps in real time.
10. Final CTA: Talk to an Expert / Request a Demo / Discuss Your Project.

8. Capability Page Requirements

8.1 AI & Agentic Solutions

- Agentic AI
- Generative AI
- AI Agents
- RAG Solutions
- Intelligent Automation
- Conversational AI
- Voice AI
- AI-enabled Enterprise Workflows
- AI Application Development

8.2 Quality Engineering & AI Assurance

- Functional / End-to-End Testing
- Automation Testing
- API Testing
- Performance Testing
- AI Testing & Agentic AI Testing
- LLM Evaluation
- RAG & Hallucination Testing
- Prompt Regression Testing
- Voice / IVR Testing
- Model Evaluation & Benchmarking
- AI Security Testing

8.3 Digital Engineering

- Application Development
- Application Modernization
- Web & Mobile Applications
- API Development
- Microservices
- Enterprise Applications
- Product Engineering
- Application Support

8.4 Data, Cloud & Enterprise Platforms

- Data Engineering
- Cloud Transformation
- AWS / Azure / GCP
- DevOps
- Analytics
- Enterprise Integration
- SAP
- Pega
- Digital Transformation

ID	Requirement	Priority
CAP-001	Each capability page must clearly state business problems, services, differentiators, relevant technologies, proof points, case studies, and CTA.	P0
CAP-002	AI Testing must be repositioned as AI Assurance & Agentic Testing and must not contain unrelated copied testing content.	P0
CAP-003	Cross-link capability pages to relevant industry use cases, case studies and products.	P1
CAP-004	Use diagrams / animations to explain complex AI, QA, data, cloud and engineering workflows.	P1

9. Telecom Industry Page - Major Redesign

Positioning Principle

The Telecom page must prove domain understanding. It should not read like a generic IT support page.

Capability Area	Required Story
OSS/BSS Transformation	Order management, billing, provisioning, customer management, service activation and network systems.
Quality Engineering	End-to-end telecom testing, system integration testing, automation, performance and regression.
AI & Customer Experience	AI virtual agents, Voice AI, IVR, Agentic AI, customer-service automation and call validation.
Network & Field Operations	Network operations, field-service workflows, automation and operational efficiency.
Data & Automation	Telecom data engineering, analytics, intelligent automation and predictive operations.

ID	Requirement	Priority
TEL-001	Remove manufacturing-related, cabling, hardware-procurement, phone-system or other generic content that does not represent NForce One's strategic Telecom services.	P0
TEL-002	Create a dedicated Telecom technology story across OSS/BSS, CX/IVR/Voice AI, Quality Engineering, Network/Field Operations, Data and Automation.	P0
TEL-003	Use approved telecom case studies and outcome metrics where legally permitted.	P1
TEL-004	Include a telecom-specific CTA such as Discuss Your Telecom Transformation / Request an AI or QA Assessment.	P1

10. Case Studies - Client & Product Portfolio

Case studies are a core proof mechanism and must be treated as a first-class website content type, not occasional blog posts.

10.1 Client Case Studies

ID	Requirement	Priority
CASE-001	Build a reusable client case-study template with: client/industry, business challenge, NForce solution, capabilities/technology, delivery model, outcomes, visuals, and CTA.	P0
CASE-002	Use customer names only when approved; otherwise use an anonymized description such as "Leading US Telecom Provider."	P0
CASE-003	Publish measurable outcomes only when they are validated and approved for external use.	P0
CASE-004	Cross-link each case study to relevant capabilities, industries and products.	P1

10.2 Product Case Studies - Mandatory for All Products

ID	Requirement	Priority
PROD-CASE-001	Prepare a case study for every NForce product / platform, regardless of whether it is immediately published.	P0
PROD-CASE-002	Each product case study must include: business problem, solution, key features, architecture / workflow, technology, AI / Agentic AI usage, business value, screenshots, and demo CTA where appropriate.	P0
PROD-CASE-003	Use real product screenshots and architecture visuals instead of generic stock illustrations wherever possible.	P1
PROD-CASE-004	Publication status must be controlled: Public / Approval Pending / Internal Only / Client Restricted.	P0

Initial product inventory to validate for case-study coverage:

- QForce AI
- AIKTRA
- OneHR
- NForce Arena (CricketHub)
- Pulse
- Sync
- Tracktion
- FlightOps
- AuraFace / NForce Identity
- Modozo
- Ask Navi
- NForce RetailOps

Note: The above inventory is a working list for internal coverage. External publication requires leadership, client, confidentiality, and product-readiness approval.

11. Actual Client Testimonials - Mandatory

ID	Requirement	Priority
TEST-001	Remove placeholder, copied, generic, or inaccurate testimonials.	P0
TEST-002	Use actual client testimonials with documented permission to publish.	P0
TEST-003	Where approved, show client name, title, company, photograph or logo, and the exact / lightly edited approved testimonial.	P1
TEST-004	Senior client testimonials should receive prominent placement on Home, Case Studies, Telecom, Quality Engineering, AI / Agentic AI, and About pages where relevant.	P1
TEST-005	Maintain an approval record for every published testimonial, image, logo and attribution.	P0

Credibility Rule

No testimonial should go live unless the person, company attribution, wording, logo/photo usage, and publication rights have been verified.

11.1 Employee Testimonials & Employee Experience - Recommended

Create an authentic employee-voice experience that helps prospective employees, clients and partners understand the NForce One culture from real team members. Employees should be able to submit their own testimonial and add their preferred photo; no testimonial or photo should be published without employee consent and internal approval.

ID	Requirement	Priority
EMP-TEST-001	Support real employee testimonials on Careers, About and other approved website areas.	P1
EMP-TEST-002	Allow employees to submit testimonial text and upload / add their own picture through an approved internal submission form or CMS workflow.	P1
EMP-TEST-003	Capture employee consent for testimonial wording, name, role/title and photo before publication; employees must be able to request removal later.	P0
EMP-TEST-004	Use actual employee photos where submitted and approved; do not replace authentic employee photography with generic stock portraits.	P1
EMP-TEST-005	Provide configurable display fields such as employee name, role/title, location/team where approved, testimonial and photo.	P2
EMP-TEST-006	Provide CMS controls to approve, edit, publish, unpublish, order and feature employee testimonials.	P1
EMP-TEST-007	Keep employee testimonial language authentic and avoid rewriting every quote into generic marketing language.	P1

Employer-Branding Principle: the goal is to show genuine employee experience and pride in working with NForce One while respecting employee choice, privacy and publication rights.

12. Actual Company & Employee Photography - Mandatory

The enhanced site should minimize generic stock photography and intentionally show the real NForce One organization with employees' written consent/permission.

ID	Requirement	Priority
PHOTO-001	Use actual NForce One company and employee photos wherever they add credibility or context.	P0
PHOTO-002	Priority photo coverage: leadership, US team, India team, delivery center, engineering teams, QA teams, AI teams, collaboration, training, innovation sessions, company events and product development.	P1
PHOTO-003	Use real client-meeting or client-event photos only when client permission has been obtained.	P0
PHOTO-004	Arrange professional photography if current images are not consistent enough in quality, lighting, framing, and branding.	P1
PHOTO-005	Maintain employee / subject consent and do not publish sensitive or unapproved imagery.	P0

13. Innovation & Products

The site must make it clear that NForce One does not only provide resources; it designs, builds, and operates technology products, accelerators, and AI-driven platforms.

- AI-powered Quality Engineering
- Agentic Automation
- Testing Accelerators
- Enterprise Automation
- AI Agents
- Digital Platforms
- Internal Products
- Client Products (where approved)
- Reusable Engineering Frameworks

ID	Requirement	Priority
INNOV-001	Create a prominent Innovation & Products landing page from the primary navigation.	P1
INNOV-002	Each externally approved product should have an overview, problem/solution story, features, technology, screenshots, case study, and demo/contact CTA.	P1
INNOV-003	Use product UI motion, workflow animation and architecture visuals to demonstrate engineering depth.	P1

14. Engagement Models

Model		Website Description	
Onshore		US-based resources and client-facing teams.	
Offshore		India-based scalable engineering and delivery.	
Hybrid		Combined US + India model.	
Managed Delivery		NForce One owns defined outcomes and delivery responsibilities.	
Project / SOW		Defined scope, milestones and deliverables.	
T&M / Staff Augmentation		Flexible role-based engagement where appropriate.	
ID	Requirement		Priority

Model	Website Description	
ENG-001	Explain engagement models clearly and position NForce One as a delivery partner with multiple commercial / delivery options.	P1

15. About Us

ID	Requirement	Priority
ABOUT-001	Clearly explain who NForce One is, its US + India presence, delivery model, Quality Engineering heritage, AI focus, innovation culture and leadership experience.	P0
ABOUT-002	Use actual leadership, office and employee photography.	P1
ABOUT-003	Avoid generic corporate statements that could apply to any IT company.	P0
ABOUT-004	Include a credible story of how NForce One combines services, products and engineering innovation.	P1

16. Visual Design & NForce Brand System

Brand Direction

All colors, gradients, buttons, headings, motion accents and UI states must match, complement, and blend naturally with the actual NForce logo colors.

ID	Requirement	Priority
DES-001	Create a formal website palette derived from the NForce logo: primary deep red / brown-red, secondary dark red, black, white, neutral grays, approved accent and gradient variants.	P0
DES-002	Do not introduce arbitrary colors that visually conflict with the NForce logo.	P0
DES-003	Use clean light surfaces with premium dark sections selectively; avoid a heavy all-black presentation.	P1
DES-004	Use modern enterprise typography, generous whitespace, consistent card systems, consistent iconography, and strong hierarchy.	P1
DES-005	Minimize generic stock imagery; prioritize actual photography, real product UI and technology illustrations.	P0
DES-006	The design quality benchmark is a modern global AI / enterprise engineering company, not a standard WordPress services template.	P1

16.1 Proposed Color Direction

Final values must be confirmed against approved NForce brand assets. The working visual direction should use a logo-derived deep crimson / brown-red with black and white as the primary system, supported by subtle neutral and blush surfaces.

17. World-Class Animation & Interactive Experience - Mandatory

Motion design should be a meaningful part of the new experience. It must communicate technology and sophistication rather than serve as decoration.

ID	Requirement	Priority
ANIM-001	Implement world-class, premium animations comparable to modern enterprise AI, SaaS and technology websites.	P0
ANIM-002	Use scroll-triggered motion, micro-interactions, interactive cards, smooth transitions, product UI animation and carefully controlled hover states where appropriate.	P1
ANIM-003	Use animated architecture / workflow visuals for AI agents, data flow, testing pipelines, cloud, telecom and intelligent automation.	P1
ANIM-004	Hero animation must be custom to the NForce story and brand rather than a generic stock animation.	P1
ANIM-005	Animations must not create excessive CPU/GPU usage, long loading, layout shifts, mobile lag or accessibility problems.	P0
ANIM-006	Support reduced-motion preferences and provide static fallbacks for users/devices where animation should be minimized.	P0

17.1 Suggested Motion Concepts

- AI agents coordinating a workflow
- Requirements flowing into automated testing and release confidence
- Telecom customer / network / billing / IVR system flow
- Data moving across cloud and enterprise platforms
- Product dashboard / UI sequences
- Metrics that animate only when scrolled into view

18. Content Quality, Migration & Governance

Every existing production page must be audited before migration. Current content should not simply be copied into the new design.

ID	Requirement	Priority
CONT-001	Audit all pages for wrong industry references, mismatched service descriptions, wrong company names, placeholder content, grammar, spelling, duplication, outdated capabilities, incorrect contact information and broken CTAs.	P0
CONT-002	Correct known content mismatches, including unrelated copy under Telecom, AI Testing and homepage service sections.	P0
CONT-003	Remove or rewrite unverified claims such as unsupported coverage, defect, rating, savings, employee-count or company-age statements.	P0
CONT-004	Establish a consistent terminology dictionary for AI, Agentic AI, Quality Engineering, AI Assurance, Digital Engineering, Telecom and delivery models.	P1
CONT-005	All final copy must receive business approval before production deployment.	P0

18.1 Publication Governance

Content Type	Minimum Approval Requirement
Client Names / Logos	Written approval required.
Testimonials	Written approval for wording + attribution + logo/photo.
Case Study Metrics	Validated and approved; anonymize if required.
Employee Photos	Subject / internal approval and privacy review.

Content Type	Minimum Approval Requirement
Product Screenshots	Confirm no credentials, customer data, secrets or confidential information.
Claims / Statistics	Source and validation required before publishing.
Employee Testimonials	Employee consent required for wording, name/title and photo; maintain removal / unpublish option.

19. Lead Generation & Contact Experience

ID	Requirement	Priority
LEAD-001	Every major page must contain one clear primary CTA appropriate to that page.	P0
LEAD-002	Supported CTAs should include: Talk to an Expert, Discuss Your Project, Schedule a Capability Discussion, Request an AI / QA Assessment, Request a Product Demo, and Contact Our Team.	P1
LEAD-003	Forms must capture Name, Company, Business Email, Phone, Area of Interest and Message at minimum, while keeping friction low.	P1
LEAD-004	Lead routing must be tested end-to-end and owned by a named internal team / mailbox.	P0
LEAD-005	Track CTA clicks, form starts, form submissions, demo requests and capability interest in analytics.	P1
LEAD-006	Lead details captured by the AI assistant must follow the same routing, consent, privacy and analytics standards as website forms.	P1

19.1 AI Website Assistant / Chatbot - Mandatory

Add an intelligent NForce One AI Website Assistant / Chatbot that helps visitors quickly understand the company, navigate capabilities, discover relevant products and case studies, and move to the appropriate business-development action. The assistant should be helpful and conversational, but it must stay grounded in approved NForce One content and must not invent client information, confidential data or unsupported claims.

ID	Requirement	Priority
CHAT-001	Provide a persistent AI Website Assistant / Chatbot accessible across the homepage and major website pages on desktop and mobile.	P0
CHAT-002	Answer approved questions about NForce One capabilities, AI & Agentic AI, Quality Engineering, Telecom, Digital Engineering, Data/Cloud, enterprise platforms, engagement models, products and case studies.	P0
CHAT-003	Use only approved website/company knowledge sources and apply guardrails to minimize hallucination, unsupported claims and exposure of confidential or NDA-restricted information.	P0
CHAT-004	Guide visitors to relevant pages, case studies, product demos, contact forms, assessments and capability discussions based on intent.	P1
CHAT-005	Capture qualified leads including name, company, business email, phone where appropriate, area of interest and conversation context with user consent.	P1
CHAT-006	Support request-a-demo, request-a-meeting, assessment and callback intents and route them to the appropriate NForce One team / workflow.	P1
CHAT-007	Provide a clear human-contact fallback when the assistant cannot answer confidently or when the visitor requests a person.	P0

CHAT-008	Maintain conversation analytics including top questions, unanswered questions, capability interest, lead conversions and drop-off points.	P1
CHAT-009	Provide admin controls for approved knowledge sources, welcome message, suggested prompts, escalation rules, lead routing and assistant availability.	P1
CHAT-010	Match NForce One branding, logo-derived colors, typography, animations and accessibility standards without obscuring page content.	P1
CHAT-011	Do not use visitor conversations to expose sensitive internal information; apply privacy notice, data-retention and security controls appropriate to the implementation.	P0
CHAT-012	The public display name may be NForce AI Assistant / Ask Navi or another leadership-approved name without changing the functional requirements.	P2

Assistant Experience Principle: it should behave like a knowledgeable NForce One digital concierge - useful enough to accelerate discovery and conversion, but transparent about uncertainty and quick to hand off to a human.

20. CMS & Content Management

ID	Requirement	Priority
CMS-001	The implementation may continue on WordPress or another approved CMS, but the final solution must support secure, maintainable content authoring.	P1
CMS-002	Marketing / business users must be able to update standard page copy, testimonials, case studies, products, photos and CTAs without code changes.	P1
CMS-003	Use reusable components / content models for capabilities, industries, case studies, testimonials, products and CTAs.	P1
CMS-004	Remove unused plugins, themes and accounts; keep the implementation intentionally lean.	P1
CMS-005	Provide reusable content models and approval controls for employee testimonials, employee photos and publication consent status.	P1
CMS-006	Provide administration for AI assistant knowledge sources, suggested prompts, escalation messages and lead-routing configuration.	P1

21. Responsive Design & Accessibility

ID	Requirement	Priority
RESP-001	All pages, navigation, forms, product visuals, tables, photos, case studies and animations must work on desktop, laptop, tablet, iPhone and Android.	P0
RESP-002	Mobile design must be intentionally designed, not merely a reduced desktop layout.	P1
A11Y-001	Use semantic headings, readable contrast, keyboard navigation, focus states, ALT text, form labels and accessible controls.	P0
A11Y-002	Animations and video must respect reduced-motion preferences and must not block access to core content.	P0

22. Performance Requirements

ID	Requirement	Priority
PERF-001	Optimize images and product screenshots using modern formats and responsive sizing.	P0
PERF-002	Use lazy loading for non-critical media and motion assets.	P1
PERF-003	Minimize unnecessary JavaScript, third-party scripts and plugin overhead.	P0
PERF-004	Use appropriate caching / CDN strategy and test real mobile performance.	P1
PERF-005	World-class animation must not come at the cost of page responsiveness, stability or usable mobile performance.	P0

23. SEO Requirements

ID	Requirement	Priority
SEO-001	Preserve valuable existing indexed URLs wherever practical; configure 301 redirects for changed URLs.	P0
SEO-002	Every major page must have unique title, meta description, H1, logical H2/H3 structure, clean URL, internal links and image ALT text.	P0
SEO-003	Implement canonical tags and relevant structured data / schema where appropriate.	P1
SEO-004	Create internal linking between capabilities, industries, case studies, products and related insights.	P1
SEO-005	Validate sitemap, robots directives and Search Console after launch.	P0

24. Security & Operational Requirements

ID	Requirement	Priority
SEC-001	Maintain valid SSL, current CMS/core/plugin versions, backups, spam protection and least-privilege access.	P0
SEC-002	Remove unused admin accounts, plugins, themes, forms and integrations.	P0
SEC-003	Protect forms using appropriate anti-spam / bot controls without creating excessive user friction.	P1
SEC-004	Product screenshots and downloads must be reviewed for credentials, PII, confidential data and secrets.	P0

25. Analytics & Measurement

ID	Requirement	Priority
ANA-001	Configure and validate Google Analytics and Google Search Console.	P0
ANA-002	Track visitors, traffic sources, page views, top capabilities, product views, case-study views, CTA clicks, form conversions and demo requests.	P1
ANA-003	Define conversion events and dashboards before production launch so the redesign can be measured.	P1

ID	Requirement	Priority
ANA-004	Track AI assistant opens, conversations, top intents, unanswered questions, CTA handoffs and lead conversions while respecting privacy requirements.	P1
ANA-005	Track employee-testimonial impressions / engagement where useful for Careers and employer-branding optimization.	P2

26. Implementation Priorities

Priority	Scope
P0 - Immediate Credibility Fixes	Remove incorrect testimonials/company names; correct wrong / mismatched copy; validate contact details; remove template content; fix grammar/spelling; remove unsupported claims; repair broken links and forms.
P1 - Core Redesign	Homepage, navigation, brand system, capability architecture, AI & Agentic, Quality Engineering / AI Assurance, Telecom, About, Contact, real photography, animation framework. Include the AI Website Assistant / Chatbot experience and its lead-routing integration.
P2 - Differentiation	Actual client testimonials, client case studies, product case studies, Innovation & Products, product screenshots, architecture/workflow visuals, business outcome stories. Add employee testimonials with employee-submitted photos and employer-branding experience.
P3 - Optimization	SEO tuning, performance, analytics, accessibility refinements, conversion optimization and ongoing content improvements.

Delivery recommendation: P0 issues should be corrected on the current live website immediately and should not wait for completion of the full redesign.

27. Final Acceptance Criteria

1. A visitor can understand what NForce One does within approximately 10 seconds.
2. AI, Quality Engineering, Digital Engineering and Telecom expertise are immediately visible.
3. US + India delivery is clearly communicated.
4. Website colors and gradients match and blend with the actual NForce logo colors.
5. Actual NForce company and employee photos are used where appropriate.
6. Actual approved client testimonials are included; no placeholder testimonials remain.
7. Client case studies are available for approved strategic engagements.
8. Case studies are prepared for all NForce products; only approved products are published externally.
9. Innovation & Products is prominently presented and uses real product visuals.
10. World-class animation and interactive experiences are implemented without harming performance.
11. No incorrect, copied, placeholder, unrelated or unapproved content remains.
12. All public claims, metrics, client names, photos, logos and testimonials are verified.
13. Navigation is simple and intuitive on desktop and mobile.
14. Every major page has a clear CTA and analytics tracking.
15. Forms and lead routing are tested end-to-end.
16. SEO metadata, redirects, sitemap and Search Console are validated.
17. Security, backups, access controls and plugin hygiene are validated.
18. All links, contact information, product screenshots and downloads are validated.
19. Final content and visual design receive business approval before production deployment.
20. AI Website Assistant / Chatbot is operational on desktop and mobile, grounded in approved NForce One content, provides human handoff, and completes lead-routing flows without exposing unapproved information.

- 21.** Employee testimonials can be managed through an approval workflow, employees can add their own pictures, and published testimonial/photo combinations have documented employee consent.
- 22.** AI assistant and employee-testimonial interactions are included in appropriate analytics, privacy, accessibility, CMS and QA coverage.

28. Required Deliverables

ID	Requirement	Priority
DEL-001	Approved sitemap / navigation architecture.	P0
DEL-002	High-fidelity responsive UX/UI designs for all primary templates.	P0
DEL-003	NForce website brand palette and component / design system.	P0
DEL-004	Motion / animation design specification and working prototypes.	P1
DEL-005	Approved homepage and all primary capability / industry / product / case-study templates.	P0
DEL-006	Real-photo asset library with approval status and usage rights.	P1
DEL-007	Client testimonial library with approval status.	P1
DEL-008	Case-study library and product-case-study coverage tracker.	P1
DEL-009	Content migration / redirect matrix.	P0
DEL-010	QA checklist covering functionality, responsive behavior, accessibility, performance, SEO, analytics, security and content accuracy.	P0
DEL-011	Production launch plan plus post-launch monitoring / rollback plan.	P0
DEL-012	Working AI Website Assistant / Chatbot configuration, approved knowledge sources, guardrails, lead routing and analytics.	P1
DEL-013	Employee testimonial module, submission / photo-upload workflow, consent tracking and approved testimonial asset library.	P1
DEL-014	AI assistant QA test pack covering accuracy, hallucination controls, privacy, fallback, responsiveness and lead conversion.	P1

29. Dependencies, Risks & Controls

Risk / Dependency	Control
Client approvals delayed	Use anonymized placeholders internally; do not publish unapproved attribution.
Insufficient real photography	Schedule professional shoots early and define shot list / permissions.
Product screenshots not public-ready	Prepare sanitized demo environments or approved screenshots.
Animation slows the site	Performance budget, progressive enhancement, lazy loading and static fallbacks.
Legacy SEO loss	URL inventory, redirect matrix, crawl validation and post-launch Search Console checks.
Too much content / navigation clutter	Enforce four capability pillars and primary conversion journeys.
Unverified claims	Require business owner / source approval before publication.
AI assistant produces inaccurate / unapproved answers	Restrict knowledge to approved sources; use confidence / fallback behavior, human escalation, regression testing and periodic content review.

Risk / Dependency	Control
Employee testimonial or photo consent changes	Maintain documented consent status, easy unpublish/removal process and CMS governance so employee content can be withdrawn promptly.

Appendix A - Standard Client Case Study Template

Client / Industry

Approved client name or anonymized descriptor; industry and context.

Business Challenge

What business, operational, quality, customer or technology problem existed?

NForce One Solution

What did NForce One design, build, test, modernize, automate or operate?

Capabilities & Technology

Relevant AI, QA, cloud, data, application, telecom and platform technologies.

Delivery Model

Onshore, Offshore, Hybrid, Managed Delivery, SOW or T&M.

Business Outcomes

Validated measurable impact: quality, speed, savings, automation, productivity, reliability or CX.

Visual Evidence

Approved screenshots, diagrams, architecture, workflow or before/after visuals.

Client Voice

Approved testimonial if available.

CTA

Discuss a similar challenge / Talk to an Expert.

Appendix B - Standard Product Case Study Template

Business Problem

What recurring problem or inefficiency does the product solve?

Product Solution

What was built and for whom?

Key Features

Core capabilities and user journeys.

Architecture / Workflow

Visual system or agent/data/workflow diagram.

Technology Stack

Frontend, backend, cloud, data, AI / model / agent stack, automation and integrations.

AI / Agentic AI Usage

Where AI is used, why it is used, and how outputs/actions are validated.

Business Value

Time savings, cost reduction, productivity, automation, quality and user experience.

Real Screenshots

Approved product UI screenshots or demo environment imagery.

Demo / Contact CTA

Request a Demo / Talk to Our Team.

Publication Status

Public / Approval Pending / Internal Only / Client Restricted.

Appendix C - Launch Readiness Checklist

- ☐ All P0 current-site credibility issues resolved.
- ☐ Final business-approved copy loaded.
- ☐ All client / employee / product media approvals complete.
- ☐ All case-study and testimonial links validated.
- ☐ Desktop, tablet and mobile QA complete.
- ☐ Animation fallback and reduced-motion behavior validated.
- ☐ Lead forms and routing tested.
- ☐ Analytics and conversion events tested.
- ☐ 301 redirects / SEO metadata / sitemap validated.
- ☐ Performance and security checks completed.
- ☐ Backup / rollback plan confirmed.
- ☐ Leadership sign-off received.
- ☐ AI Website Assistant accuracy, guardrails, human handoff, lead routing and mobile behavior validated.
- ☐ Employee testimonial wording, employee-submitted pictures, consent records and publication approvals validated.

Expected Outcome

Real Company. Real People. Real Clients. Real Products. Real Technology. Real Outcomes. The redesigned NForce One website must operate as a world-class sales, branding, credibility, recruiting and client-conversion platform, supported by an intelligent AI Website Assistant and authentic employee voices.
